Video Transcript:

Welcome to the first module of our Management Consulting course. We begin our learning journey with a good and practical overview of management consulting.

We are going to start by doing a deep dive into what management consulting really is and how management consultants advise clients and provide unique expertise that clients often struggle to find internally and that they are sometimes ready to pay a lot of money for.

We will look at how companies engage with external and internal consultants depending on the type of challenges they face and the objectives they have. We will also look at the type of expertise that some consultants can provide, including strategy, change, finance, or technology!

It is important that you get a good understanding of the type of work management consultants do, as well as the difference between internal and external consultants. That might prove really useful as you contemplate your own career and think of the type of work you really want to do.

When we have that covered, we will spend some time understanding the consulting industry and the impact technology is having on the way consultants work.

We will end by completing a walkthrough of some of the skills most often deployed by management consultants, and finally, we will investigate the areas where consultants provide the most value for their clients.

Take your time as you work through all the material. Don't skip anything. At the end of the module, you will have a Padlet session, the reflective exercise where you can share your thoughts and interact with your colleagues.

I think this is going to be a great module, and I look forward to having you go through it. Take your time and enjoy! I'll see you again at the beginning of Module 2. Bye for now.

Lesson 1: Overview of the Management Consulting Industry

Differences Between Internal and External Consultants

Distinguishing between internal and external consultants reveals two distinct but valuable approaches to addressing organizational challenges.

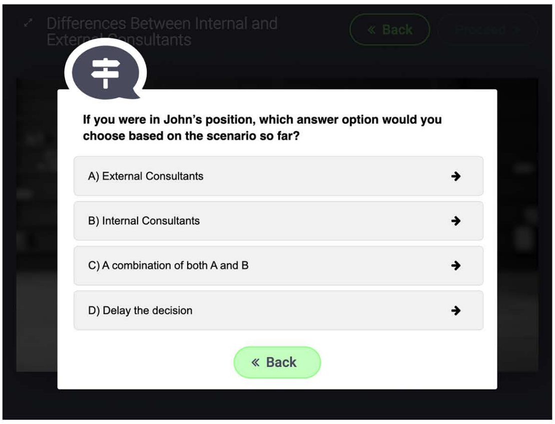
Internal consultants are individuals who are employed within the organization itself. They possess an in-depth understanding of the company's culture, structure, and operations. This familiarity allows them to navigate internal dynamics effectively, build trust among colleagues, and easily access organizational data. Their long-term commitment to the organization often means they are deeply invested in its success. However, internal consultants may struggle to maintain complete objectivity, and their perspectives can be influenced by internal politics and preexisting biases.

On the other hand, external consultants are brought in from outside the organization, offering a fresh and impartial perspective. They typically have expertise gained from working with a variety of clients and industries, which can lead to innovative solutions. External consultants are often brought in for specific projects and can provide a broader range of perspectives. However, they may require more time to familiarize themselves with the organization's unique intricacies, potentially leading to longer project ramp-up times.

Internal consultants excel at addressing recurring issues and nurturing internal talent due to their deep institutional knowledge and ongoing relationships within the organization. External consultants, by contrast, are skilled at tackling complex, one-time projects and providing an objective evaluation of existing processes.

In conclusion, the choice between internal and external consultants depends on the organization's specific needs and the nature of the project at hand. Some organizations benefit from a combination of both, harnessing the strengths of each approach to achieve comprehensive and effective results.

Now, let's attempt a scenario-based interaction where the situation could take place in real life.



If you were in John's position, which answer option would you choose based on the scenario so far?

A) External Consultants

B) Internal Consultants

C) A combination of both A and B

D) Delay the decision

Duration of Internal and External Clients

Then there's the question of following through. Internal folks remain after projects wrap up to shepherd change over the long haul, which is great for continuity. But as outsiders, we have the benefit of departing entirely after deliverables so that clients' own transformations from inception without perceived interference later on.

Overall, there are pros and cons to both, but for maximum impartiality and fresh perspective, external consultants can sometimes have an edge in how our solutions are perceived. The impact just depends on individual circumstances.

Lesson 1: Overview of Analysis Frameworks

What Are Some of the Key Frameworks and Models in the Industry?

Here are some of the key frameworks and models widely used across the management consulting industry:

SWOT Analysis

As discussed, this was developed in the 1960s by Albert Humphrey at Stanford Research Institute, now SRI International. Humphrey saw analyzing internal/external factors as critical for effective business planning.

Its popularity grew as consulting became more widespread in the 70s/80s. Jack Mobley helped establish behavioural questioning best practices. By the 90s, academics like George Panagiotou published standard guidelines to maximize SWOT's diagnostic power.

Transitioning from a broad overview of frameworks, let's now zoom in on the SWOT analysis. This tool not only pinpoints strengths and weaknesses but also strategizes for future challenges and opportunities. Let's explore its practical use in consulting.

Lesson 3: Project Planning and Management

Keys to Successful Project Planning

Use the step list below to understand the keys to successful project planning.

Why Plan? Planning helps you finish projects on time and within budget. Good planning sets you up for success from the start.

Assign Roles: Decide who will do what. Make schedules to keep everyone on track.

Budget Wisely: Figure out how much each part will cost. Plan for unexpected expenses.

Manage Resources: Make sure you have all the people and tools you need without going overboard.

Monitor and Adjust: Watch how things are going and make changes as needed. Keep everyone updated on progress and changes.

Start with Scoping: Talk with everyone involved to set goals and rules. Make sure everyone agrees on what success looks like.

Keep the Momentum: Use regular check-ins to make sure things are moving along and people are engaged.

Break it Down: List all the tasks you need to do. Estimate how long each will take and what resources you'll need.

Finish Strong: Make sure you've reached your goals and that everyone knows how to use what you've created.

Check

By following these steps, you're setting your project up for success. You'll be prepared to handle surprises and will keep everyone focused and accountable.

From detailed planning, we now shift to the key roles in consulting that ensure effective execution. Each role, from the Relationship Manager to the Core Delivery Team, is vital for success. Let's explore their interplay and impact.

Lesson 3: Competitive Analysis

Key Financial Benchmarks: Activity

For each of these ratios, decide whether having a higher or lower value is better.

Drag the term and drop it on its corresponding description.

3. A higher value is advantageous, as it reflects the company's proficiency in converting sales into net income, accounting for all expenses, at the bottom line. ______

Lesson 3: Competitive Analysis

Key Performance Indicators

A Key Performance Indicator (KPI) is a specific, quantifiable measure used to evaluate the success of an organization's performance in achieving its strategic and operational goals. These indicators are critical for decision making and strategy adjustment.

When benchmarking key performance indicators, it's important to analyze metrics across functional areas to have a holistic view of operations:

Revenue Growth

Benchmarking revenue growth against competitors and industry standards is a robust indicator of the efficacy of a company's go-to-market strategy. Achieving double-digit annual growth denotes considerable market penetration, and outperforming one's peers signifies superior performance.

Costs per Unit

Customer Satisfaction

Defects per Million

Sales Force Productivity

Employee Turnover

By closely tracking these metrics internally and externally on an ongoing basis, optimization opportunities will naturally surface through benchmarked performance gaps.

Having established the definitions and targets for our key financial benchmarks, let's look into interpreting the optimal direction for each metric—whether a higher or lower value signifies better performance.
